

Netflix Titles Data Analysis Report

Dataset: Netflix Movies and TV Shows (2024)

Source: Kaggle

Tool Used: Microsoft Excel

Task Performed: Exploratory data analysis and dashboard creation

1. Introduction

This report provides a detailed analysis of the Netflix Titles dataset using Microsoft Excel. The analysis focuses on identifying trends and patterns in content type, genre distribution, content ratings, geographical origins, and release history. A visual dashboard was created to effectively communicate these insights.

2. Objectives

- To explore the distribution of Movies and TV Shows on Netflix.
- To identify the most common genres in both categories.
- To examine the most frequent content ratings.
- To analyze the countries contributing the most content.
- To observe yearly trends in content releases.

3. Key Findings

3.1 Genre Analysis

Top 10 Movie Genres include Dramas, Comedies, Action & Adventure, and Documentaries.

Top 10 TV Show Genres include International TV Shows, Crime TV Shows, Kids' TV, and Reality TV.

Insight: Netflix caters to diverse viewer interests by offering a wide variety of genres across age groups and regions.

3.2 Type Distribution

Approximately 70–75% of the titles are Movies, while 25–30% are TV Shows.

Insight: While movies dominate Netflix's library, TV shows continue to form a significant and growing portion.

3.3 Ratings Distribution

Most common content ratings are TV-MA, TV-14, PG, and R.

TV-MA is the leading rating, especially among TV Shows, highlighting a large amount of mature content.

Insight: Netflix primarily targets mature audiences while still offering content suitable for families and younger viewers.

3.4 Country Analysis

Top countries contributing content include: United States, India, United Kingdom, Canada, and Japan.

Insight: Netflix's content is globally sourced, with strong contributions from both Western and Asian countries, showing its commitment to international audiences.

3.5 Year-wise Release Trends

A consistent rise in content releases was observed from 2010 to 2019, with a peak around 2018–2019.

A drop in releases post-2020 is likely due to the global pandemic affecting production.

Insight: The increase in titles reflects Netflix's expansion and investment in original content throughout the last decade.

4. Excel Techniques Employed

- **Sorting and Filtering:** To isolate specific types, ratings, and countries.
- **Pivot Tables:** Used to summarize and group data such as genres and release years.
- **Charts and Graphs:** Created bar charts, pie charts, and line graphs to visualize top genres, ratings distribution, type counts, country contributions, and annual trends.
- **Dashboard:** An interactive Excel dashboard was developed to present key metrics and trends in a user-friendly format.

5. Dashboard Overview

Included Visuals:

- Top 10 Genres for Movies and TV Shows
- Count of Movies vs. TV Shows
- Top 10 Ratings for both content types
- Country-wise distribution of content
- Number of releases per year

These visuals offer a clear and insightful look into Netflix's global content strategy and viewer targeting.

6. Conclusion

This project demonstrates how Excel can be effectively used for data analysis and visualization. By exploring Netflix's content distribution across genres, types, ratings, countries, and years, we gain valuable insights into how the platform has evolved and adapted to a global audience. The findings can help content strategists, viewers, and analysts better understand Netflix's offerings and trends.
